

Secure Persona® - Security for Every Digital Role!

Smartphone users live mobile (digital) lives - at home, in the office, and on the road. For each role, there are apps, data, connections, and security and privacy needs that conflict and compete. Wouldn't it be ideal if one device could meet all digital life mobility needs; and maintain security, separation and privacy for each? *Introducing **Secure Persona®** and **Digital Bodyguard™**. Secure Persona, with Digital Bodyguard, is the only mobile device security and identity management solution to allow multiple digital lives on one device, without compromise!*

Secure Persona is...

The only battle-tested, patented¹, mobile device security and identity solution that creates separate, secure and fully encrypted partitions (*Personas*) that cannot be co-mingled or accessed simultaneously.

Secure Persona enables the mobile user to operate in and between *Personas*; eliminating the inconvenience, cost, and risks of carrying multiple devices.

Secure Persona is a built-in feature of Redwall Mobile® Security and is available on the Motorola Solutions LEX series Mission Critical Handhelds and other mobile devices.

Secure Persona Benefits:

Secure Persona isolates and separates workplace sensitive information from personal information; and cannot be overcome by operator intent or error.

Secure Persona creates an identity-specific profile for all applications, data, network & cloud connectivity and storage.

Secure Persona eliminates the need for, threats from, and risks of "Bring Your Own Device" in the workplace and in the field.

¹ - US Patents 9,514,300 and 9990505

Digital Bodyguard is...

Derived from Small Business Innovative Research contracts* sponsored by the US Marine Corps. It takes security to a new level, layering resilience and adding the ability to:

- 1) identify unauthorized attempts to modify the operating system or its component services,
- 2) prevent or correct modifications, and
- 3) restore secure mission operations with a minimum of disruption; including protection against denial of service and zero-day attacks.

Creating Value with Secure Persona & Digital Bodyguard:

End Users – securing and simplifying their digital lives; by protecting all information and preserving privacy.

Mobile Device Vendors – enabling increased sales per customer and deepening the customer relationship.

LTE Service Providers – creating demand for work and personal use subscriptions on one mobile device.

Cloud Service Providers – creating long-term demand for servers, identity management hosting and storage for enterprises and end-users.

* Contracts M67854-18-C-6512 and M67854-19-C-6517
